Hi,

has anyone had any luck in obtaining the software for this evaluation board? I requested the standard (USB Device) packages and was able to download some password protected files. On the download page it says that the passwords are sent to the given email address within a couple of days – that's three weeks ago now and I haven't gotten anything.

I also requested the USB Host packages. I was asked some questions which I replied to immediately. After a couple of days I found my support request with the ticket status "closed" but again I didn't receive anything.

Is there any hidden magic in obtaining this software? Any success stories?

Thanks in advance
Roland
